On-Screen Editing Tools

Dynamic Gnomon

The Dynamic Gnomon helps you manipulate geometry and planes interactively. The gnomon comprises three axes connected at an origin sphere. Choose from the selection points listed here to apply different types of transformations to either the gnomon or vour selected aéometry.

See Mastercam Help for more information.

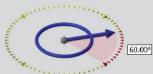

Polar control

The Polar control consists of the origin sphere, a rotation compass, and a green single-axis arrow. It can rotate as well as edit the position of entities in the graphics window.

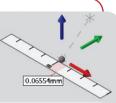

Rotate control

The Rotate control can only rotate on-screen entities within the current Cplane. It consists of the origin sphere and a rotation compass.

Delta control

The Delta control consists of the origin sphere and three single-axis arrows that can be manipulated independently.

Hover over any single-axis arrow until it highlights. Click and drag the arrow to a new position using the ruler to guide your placement.

To rotate entities on screen, hover over the blue circle until the rotation compass appears. Rotate the control or enter a value in the on-screen field. Rotating from inside the compass allows you to snap to angular increments. Manipulating either control outside the compass ignores the snap control.

Ouick Masks

Quick Masks let you control entity masking with a single mouse click. Each Quick Mask button has two functions, depending on whether you click the left half or right half of the button. Hover your mouse over each button half to view its function.

 χ

H4)

• Click the right half of the same button to limit your individual selections to only the specific entity type.

• Use the Select All Advanced/Select Only Advanced Quick Mask button to open the Select All dialog box or the Select Only dialog box to filter selections by entity attributes.

• The right half of the Clear All Masking button clears all selection criteria from both the Select All and the Select Only dialog boxes.
